

# Digital Permitting Solution - EasyPermits

November 2023

**75 folders**

for repowering  
10 wind turbines  
in Germany

€10,000 for printing

**60 folders**  
for 3 new  
turbines in  
Germany

*“I can identify with the pain-points in the permitting process. **I tested EasyPermits in our municipality, and so far I am quite impressed.***

***It was eye-opening to see how existing technology can help to make the process more efficient for everyone:** for me, for my colleagues, developers and also for community members that I engage with.*

*If I can save mine and everyone's time by having the right system to receive, file and dispatch documents, to use templates so that I don't have to re-work information for different internal and external purposes, **I would be able to do things faster and dedicate time to the most important parts of the permitting process:** ensuring the project is developed with respect to my community members and biodiversity.”*

Jakob Hasselgreen  
City Planning Official in the Danish municipality of Vesthimmerland

***“I hope that my municipality introduces EasyPermits.***

*EasyPermits saves me time, because I have a good overview of my projects, and documents and tasks don't get lost.*

*I get an overview of all my projects at one glance, and the clear workflow simplifies my tasks.*

***EasyPermits will make it easier for me to handle projects, and therefore I can process more projects simultaneously, which will speed up green energy transition.***

Heidi Højriis Poulsen  
City Planning Official in the Danish municipality of Vesthimmerland

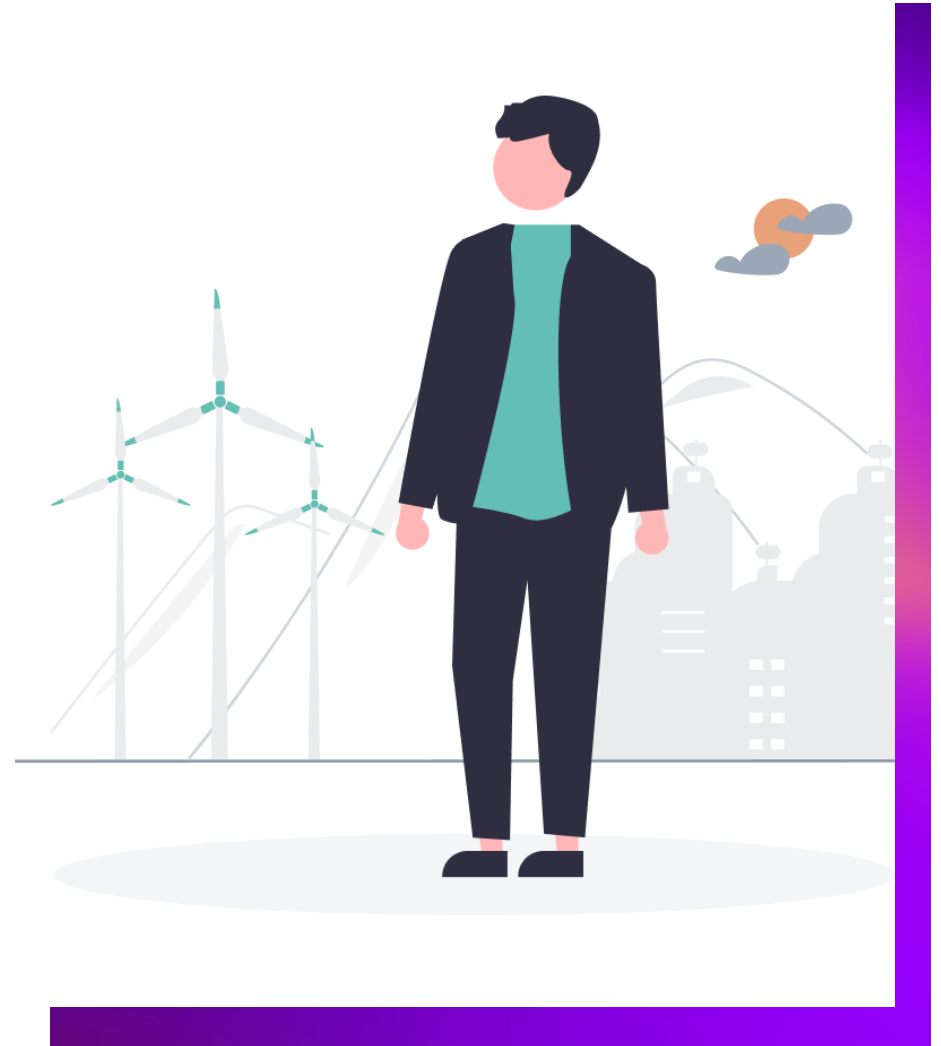

*“We would encourage the municipalities to introduce Easy Permits, **so us developers can use it.**”*

***EasyPermits will enable us to speed up the permitting process, because we can have more projects in the pipeline.***

*The visibility and transparency of EasyPermits helps me to track the progress of my project in the municipality, and helps me understand where I could support the permitting agents.”*

Jeppe Slot Wöhlk

Project Developer at NRGi Renewables

# Introduction to Digital Permitting Solution - EasyPermits

WindEurope, Amazon Web Services (AWS), the World Economic Forum and Accenture are collaborating on a digital permitting solution to bring new ways to solve one of the biggest challenges of the renewables industry

**The goal:** To accelerate permitting process and shorten time to market for large-scale renewable energy projects

## Target users

Permitting Agent

Project Developers

Community

represents local citizens interested in upcoming windfarm developments.

## Solving three key challenges

# Welcome To EasyPermits

EasyPermits is your digital one-stop shop for everything related to onshore wind projects in the permitting process.

With EasyPermits we are committed to streamline the permitting process by improving information management, increase transparency of the onshore wind farm permitting process and increase collaboration between project developers, permitting agents as well as the community members.

EasyPermits is a web-based tool developed in collaboration with WindEurope, Amazon Web Services and Accenture and supported by the World Economic Forum.

### I am a Community Member

I live in a municipality with planned wind projects. I want to learn more about the upcoming wind projects near me. I want to stay informed and actively engage in discussions about their impact on our community.

[Search Wind Projects](#)

### I am a Permitting Agent

I work at the municipality, process permit applications or provide my expertise. I want to use the tool for managing the permit applications from Project Developers and engage my community of upcoming planned projects.

[Sign In](#)

### I am a Project Developer

I work for a company that wants to develop wind projects. I want to use the tool to submit a request for wind projects and send the necessary documentation to the permitting agents and engage the community on project activities and benefits.
